## Advanced Parallel Architecture

## Lesson 8

Annalisa Massini - 2016/2017

## Redundant number systems

## Redundant number systems

- Conventional radix-r systems use [ $0, r-1$ ] digit set radix-10 $\rightarrow 0,1,2,3,4,5,6,7,8,9$
- If the digit set (in radix-r system) contains more than $r$ digits, the system is redundant
- radix- $2 \rightarrow 0,1,2$ or $-1,0,1$
- radix-10 $\rightarrow 0,1,2,3,4,5,6,7,8,9,10,11,12,13$
- radix-10 $\rightarrow-6,-5,-4,-3,-2,-1,0,1,2,3,4,5$
- Redundancy may result from adopting the digit set wider than radix and the number interpretation is conventional
Redundancy - representation of numbers is not unique

## Redundant number systems

- Redundant numbers with [ $0, \mathrm{~m}$ ] digit set can be represented by two numbers of $[0, \mathrm{n}]$ digit sets, where $\mathrm{m}=2 \mathrm{n}$
- Conversion requires ordinary addition of two such numbers with [ $0, \mathrm{n}$ ] digit set representation

- Decomposed representation is not unique, but the sum amounts to correct result

## Redundant number systems

- Redundant binary numbers may be coded with bit-fields, e.g:
- 0: (0,0),
- $1:(0,1)$ or $(1,0)$,
- 2: $(1,1)$
- Decomposed representation is not unique, but the sum amounts to correct result

|  | 1 | 1 | 2 | 0 | 2 | 0 |  |
| ---: | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  | 1 | 1 | 1 | 0 | 1 | 0 |  |
|  | radix-2, digit set $[0,2]$ |  |  |  |  |  |  |
|  | 0 | 0 | 1 | 0 | 1 | 0 |  |
|  | 1 | 0 | 0 | 0 | 1 | 0 | 0 |$\quad$| radix-2, digit set $[0,1]$ |
| ---: |

## Redundant number systems

- Carry-free addition $\rightarrow$ no carry propagation
- All digit additions can be done simultaneously
- Carry-free addition is possible with widening of the digit set

## Redundant number systems

- Reduction of digit set by carry propagation by only one position

## Signed-digit numbers

- All digits have weights $r^{p}$ (p-position, $r$-radix)
- Digits can have signed values
- Any set digit $[-\alpha, \beta]$ including 0 , can be used
- If $\alpha+\beta+1>r$ the numbering system is redundant

$$
\begin{array}{lll}
{[-1,1] \text { radix-2 }} & \rightarrow & 1-10-10=6_{(10)} \\
{[-1,3] \text { radix-4 }} & \rightarrow & 1-1203=227_{(10)} \\
1111(2 \text { 's compl.) } & \rightarrow & -1111=-1
\end{array}
$$

## Signed-digit numbers

- A radix-r redundant signed-digit number system is based on digit set $S=\{-\beta,-(\beta-1), \ldots,-1,0,1, \ldots, \alpha\}$,
where $1 \leq \alpha, \beta \leq r-1$
- The digit set $S$ contains more than $r$ values $\rightarrow$ multiple representations for any number in signed digit format $\rightarrow$ redundant
- A symmetric signed digit has $\alpha=\beta$
- Carry-free addition is an attractive property of redundant signed-digit numbers

## Signed digit representation

- In mathematical notation for numbers, signed-digit representation is a positional system with signed digits
- The representation may not be unique
- Signed-digit representation can be used to accomplish fast addition of integers because it can eliminate chains of dependent carries

## Modified signed digit representation

A. K. Cherri, M. A. Karim, "Modified-signed digit arithmetic using an efficient symbolic substitution", Appl. Opt. (1988)

## Modified signed digit representation

- The set of digit is $\{-1,0,1\}=\{\overline{1}, 0,1\}$
- The representation is not unique:

$$
\begin{aligned}
& \overline{1} 01 \overline{1}=-8+2-1=-7 \\
& 1001=-8+1=-7 \\
& 1011 \overline{1}=-8+4-2-1=-7
\end{aligned}
$$

- The number of possible representation depends on the length of the sequence of digits
- To perform the addition, truth table are used

## Modified signed digit representation

- Truth tables

|  |  | First addend |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  | -1 | 0 | 1 |
|  | -1 | 0 | -1 | 0 |
|  |  | -1 | 0 | 0 |
|  | 0 | -1 | 0 | 1 |
|  |  | 0 | 0 | 0 |
|  | 1 | 0 | 1 | 0 |
|  |  | 0 | 0 | 1 |

- Three steps are needed to obtain the sum
- Left table is applied in step 1 and 3
- Right table is applied in step 2
- Output: sum $\rightarrow$ lower row - complemented sum $\rightarrow$ upper row

## Modified signed digit representation

Example

$$
\begin{array}{rrrrrr}
1 & \overline{1} & 0 & 1 & \overline{1} & \\
\overline{1} & 1 & \overline{1} & 1 & 0 & -10
\end{array}
$$

|  |  |  | First addend |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | -1 | 0 | 1 |
|  | $0_{0}^{1}$ | 1 | $-1$ | $-1{ }^{1}$ | 0 |
|  | $\begin{aligned} & \text { 흄 } \\ & \text { 응 } \end{aligned}$ | $0$ | $-1{ }^{1}$ | 0 | $1^{-1}$ |
|  | $\stackrel{9}{0}$ |  | 0 | $1^{-1}$ | $1{ }^{0}$ |
|  |  | First addend |  |  |  |
|  |  | -1 |  | 0 | 1 |
| Dc$\frac{0}{0}$000000$\sim$ | -1 |  | 0 | -1 | 0 |
|  |  | -1 |  | 0 | 0 |
|  | 0 | -1 | 1 | 0 | 1 |
|  |  | 0 |  | 0 | 0 |
|  | 1 |  | 0 | 1 | 0 |
|  |  | 0 |  | 0 | 1 |

## Modified signed digit representation

Example

|  | 1 $\overline{1}$ 0 1 $\overline{1}$ <br>  $\overline{1}$ 1 1 1 | 0 | -10 |  |  |  |
| ---: | ---: | ---: | ---: | ---: | ---: | ---: |
| 0 | 0 | 1 | 0 | 1 |  |  |
| 0 | 0 | $\overline{1}$ | 1 | $\overline{1}$ | 0 |  |

|  |  | First addend |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  | -1 | 0 | 1 |
|  | $\begin{array}{l\|l} - \\ 0 & - \\ \text { 워 } \end{array}$ | -1 | $-1$ | 0 |
|  | $\begin{aligned} & \overrightarrow{0} \\ & \frac{\pi}{0} \end{aligned}$ | $-1$ |  | $1^{-1}$ |
|  | $1$ | $0^{0}$ | $1^{-1}$ | $1{ }^{0}$ |
|  |  | First addend |  |  |
|  |  | -1 | 0 | 1 |
|  | -1 | $-1$ | $0^{-1}$ | 0 |
|  | 0 | $0^{-1}$ | $0^{0}$ | $0^{1}$ |
|  | 1 | $0$ | $0^{1}$ | $1{ }^{0}$ |

## Modified signed digit representation

Example

|  | 1 | $\overline{1}$ | 0 | 1 | $\overline{1}$ | 9 |
| ---: | ---: | ---: | ---: | ---: | ---: | ---: |
|  | 1 | 1 | 1 | 1 | 0 | -10 |
| 0 | 0 | 1 | 0 | 1 |  |  |
| 0 | 0 | $\overline{1}$ | 1 | $\overline{1}$ | 0 |  |
| 0 | 1 | 0 | 1 | 1 |  |  |
| 0 | 0 | 1 | 0 | 0 | 0 |  |

|  |  |  | First addend |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | -1 | 0 | 1 |
|  |  | - |  | $-1{ }^{1}$ | $0^{0}$ |
|  |  | 0 | $-1$ | 0 | $1^{-1}$ |
|  |  | 0 | $0^{0}$ | $1^{-1}$ | $1{ }^{0}$ |
|  |  |  | First addend |  |  |
|  |  |  | 1 | 0 | 1 |
|  | -1 | -1 | 0 | $0^{-1}$ | 0 |
|  | 0 | 0 | -1 | $0^{0}$ | $0^{1}$ |
|  | 1 | 0 | 0 | $0^{1}$ | $1{ }^{0}$ |

## Modified signed digit representation

Example

|  | 1 | $\overline{1}$ | 0 | 1 | $\overline{1}$ | 9 |
| ---: | ---: | ---: | ---: | ---: | ---: | ---: |
|  | $\overline{1}$ | 1 | $\overline{1}$ | 1 | 0 | -10 |
| 0 | 0 | 1 | 0 | 1 |  |  |
| 0 | 0 | 1 | 1 | 1 | 0 |  |
| 0 | $\overline{1}$ | 0 | 1 | 1 |  |  |
| 0 | 0 | 1 | 0 | 0 | 0 |  |
|  | 0 | 0 | 0 | 1 | $\overline{1}$ |  |
| 0 | 0 | 0 | $\overline{1}$ | 1 |  |  |

|  |  |  | First addend |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | -1 | 0 | 1 |
|  |  | y |  | $-1{ }^{1}$ | $0^{0}$ |
|  |  | $0$ | ${ }_{-1}^{1}$ | 0 | $1^{-1}$ |
|  | 总 | 1 |  | $1^{-1}$ | $1{ }^{0}$ |
|  |  | First addend |  |  |  |
|  |  | -1 | 1 | 0 | 1 |
| 00$\overline{0}$0000000$\sim$ | -1 |  | 0 | -1 | 0 |
|  |  | -1 |  | 0 | 0 |
|  | 0 |  | -1 | 0 | 1 |
|  |  | 0 |  | 0 | 0 |
|  | 1 |  | 0 | 1 | 0 |
|  |  | 0 |  | 0 | 1 |

## RB - Redundant binary number representation

G. A. De Biase, A. Massini "Redundant binary number representation for an inherently parallel arithmetic on optical computers",

$$
\text { Appl. Opt., } 32 \text { (1993) }
$$

## RB - Redundant Binary Representation

- An integer D obtained by

$$
D=\sum_{i=0}^{n-1} a_{i} 2^{i-\lceil i / 2\rceil}
$$

- This weight sequence characterizes the RB number representation and is:

$$
\begin{array}{llllllllll}
\cdots & 8 & 8 & 4 & 4 & 2 & 2 & 1 & 1 \\
& r & n & r & n & r & n & r & n
\end{array}
$$

- All position weights are doubled: the left digit is called $r$ (redundant) and the right digit $n$ (normal)

## RB - Redundant Binary Representation

- RB representation of a number can be obtained from its binary representation by the following recoding rules:

$$
0 \rightarrow 00 \quad 1 \rightarrow 01
$$

- The RB number obtained in this way is in canonical form
- This coding operation is performable in parallel in constant time (one elemental logic step)

## RB - Redundant Binary Representation

- Each RB number has a canonical form and several redundant representations
- Examples of unsigned RB numbers (canonical and redundant)

| 0 | 000 | 000000 |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- |
| 1 | 001 | 000001 | 000010 |  |  |
| 2 | 010 | 000100 | 001000 | 000011 |  |
| 3 | 011 | 000101 | 001001 | 001010 |  |
| 4 | 100 | 010000 | 100000 | 001100 | 000111 |
| 5 | 101 | 010001 | 010010 | 100001 | 100010 |
| 6 | 110 | 010100 | 011000 | 101000 | 010011 |
| 7 | 111 | 010101 | 010110 | 101001 | 101010 |

## Table for addition

- Truth table

|  | 00 | 01 | 10 | 11 |
| :---: | :---: | :---: | :---: | :---: |
| 00 | 00 | 10 | 00 | 10 |
|  | 00 | 00 | 01 | 01 |
| 01 | 00 | 10 | 00 | 10 |
|  | 01 | 01 | 10 | 10 |
| 10 | 00 | 10 | 00 | 10 |
|  | 01 | 01 | 10 | 10 |
| 11 | 00 | 10 | 00 | 10 |
|  | 10 | 10 | 11 | 11 |

## Table for addition

- Two steps: parallel application of the table 2 on all $r n$ pairs
- Output: sum on the lower row and zero on the upper row

|  | 00 | 01 | 10 | 11 |
| :---: | :---: | :---: | :---: | :---: |
| 00 | 00 | 10 | 00 | 10 |
|  | 00 | 00 | 01 | 01 |
| 01 | 00 | 10 | 00 | 10 |
|  | 01 | 01 | 10 | 10 |
| 10 | 00 | 10 | 00 | 10 |
|  | 01 | 01 | 10 | 10 |
| 11 | 00 | 10 | 00 | 10 |
|  | 10 | 10 | 11 | 11 |

## RB - Redundant Binary Representation

## - Example

| 0 | 0 | 0 | 1 | 0 | 1 | 1 | 1 | 8 |  |  | 00 | 01 | 10 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :---: | :---: | :---: | :---: |
| 0 | 00 | 00 | 10 | 00 | 11 |  |  |  |  |  |  |  |  |
| 0 | 0 | 1 | 1 | 0 | 1 | 1 | 1 | 0 | 11 |  | 00 | 00 | 01 |
|  |  |  | 01 |  |  |  |  |  |  |  |  |  |  |

## RB - Redundant Binary Representation

- Example

|  |  |  |  |  |  |  |  |  | 00 | 01 | 10 | 11 |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :---: | :---: | :---: | :---: |
| 0 | 0 | 0 | 1 | 0 | 1 | 1 | 1 | 8 | 00 | 00 | 10 | 00 | 10 |  |
| 0 | 0 | 1 | 1 | 0 | 1 | 1 | 0 | 11 |  | 00 | 00 | 01 | 01 |  |
| 0 | 0 | 1 | 0 | 1 | 0 | 1 | 0 |  |  | 01 | 00 | 10 | 00 | 10 |
| 0 | 1 | 0 | 0 | 1 | 1 | 0 | 0 |  |  |  | 01 | 01 | 10 | 10 |
|  |  |  |  |  |  |  |  |  |  |  |  | 10 | 00 | 10 |
|  |  |  | 00 | 10 |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  | 01 | 01 | 10 | 10 |

## RB - Redundant Binary Representation

- Example

|  |  |  |  |  |  |  |  |  |  | 00 | 01 | 10 | 11 |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :---: | :---: | :---: | :---: |
| 0 | 0 | 0 | 1 | 0 | 1 | 1 | 1 | 8 | 00 | 00 | 10 | 00 | 10 |  |
| 0 | 0 | 1 | 1 | 0 | 1 | 1 | 0 | 11 |  |  | 00 | 00 | 01 | 01 |
| 0 | 0 | 1 | 0 | 1 | 0 | 1 | 0 | 7 |  | 01 | 00 | 10 | 00 | 10 |
| 0 | 1 |  | 0 | 0 | 1 | 1 | 0 | 0 | 12 |  | 01 | 01 | 10 | 10 |
| 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |  |  | 010 | 00 | 10 | 00 |
| 1 | 0 | 1 | 1 | 1 | 0 | 1 | 0 | 19 |  | 01 | 01 | 10 | 10 |  |
|  |  |  |  |  |  |  |  |  |  |  |  | 01 | 00 | 10 |
| 00 | 10 |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  | 10 | 10 | 11 | 11 |  |

## RB - Redundant Binary Representation

- In analogy with the 2's complement binary system, a signed RB number is obtained by

$$
D=-\sum_{i=n-2}^{n-1} a_{i} 2^{i-\lceil i / 2\rceil}+\sum_{i=0}^{n-3} a_{i} 2^{i-\lceil i / 2\rceil} \quad n \text { even }
$$

- The same procedure of the addition of two unsigned RB numbers obtains the algebraic sum of two signed RB numbers

## RB - Redundant Binary Representation

- The additive inverse of an RB number is obtained by following a procedure similar to that used in the 2's complement number system, taking into account that the negation of all RB representations of the number 0 is $(-2)_{10}$ whereas in the 2's complement binary system it is $(-1)_{10}$
- Procedure
- Step 1 - all digits of the RB number are complemented
- Step 2 - algebraic sum between the RB canonical form of (2) 10 and the RB number
- The output is the additive inverse of the considered RB number

## RB - Redundant Binary Representation

- The decoding of RB numbers, with the correct truncation, can be performed with the following procedure that derives directly from the RB number definition
- Procedure
- The input is RBn and RBr
- Binary addition RB + RBr.
- Only the first $\mathrm{n} / 2$ bits are considered
- The output is the corresponding binary or 2's complement binary number

## RB - Redundant Binary Representation

- Zero and Its Detection
- In the case of unsigned RB numbers the $(0)_{10}$ has only the $R B$ canonical form and is easily detectable
- In the case of signed RB numbers, $(0)_{10}$ has many RB representations
- Example for six-digit signed RB numbers:
(000000)
(101011)
(101100)
(100111)
(010111)
(011100)
- This difficulty can be overcome by using the number $(-1)_{10}$ instead of (0) 10

## RB - Redundant Binary Representation

## - Zero and Its Detection

- In fact, any redundant representation of the number $(-1)_{10}$ obtains the canonical representation of the $(-1)_{10}$ if the following rules acting on $r n$ pairs are applied

$$
01 \rightarrow 01 \quad 10 \rightarrow 01
$$

- Then, if the result of an algebraic sum between an RB number and an RB representation of $(-1)_{10}$ is an RB representation of the number $(-1)_{10}$ again, this RB number is a representation of $(0)_{10}$

## RB - Redundant Binary Representation

## - Zero and Its Detection

- Then the procedure to detect the number (0) ${ }_{10}$ is:

## Procedure

- Input an RB number
- Step 1 - algebraic sum between the RB canonical form of (-1) 10 and the RB number
- Step 2 - application of rules to the result
- Output is the RB canonical form of $(-1)_{10}$ or of another RB number

## RB - Redundant Binary Representation

- Comparison of two RB numbers

## Procedure

- Input - the first RB number and the additive inverse of a second RB number
- Step 1 - algebraic sum between the two RB numbers
- Step 2 - Procedure for the zero detection applied to the result
- The output is the RB canonical form of $(-1)_{10}$ or of another RB number
